Executive Summary

BrightTV delivered 91.3K viewing minutes across 4,386 unique subscribers in Q1 2016, an average of 20.8 minutes per subscriber. Consumption is highly concentrated: ICC Cricket World Cup 2011 alone accounts for 27.1% of all minutes, and Gauteng contributes 36.6% of the subscriber base. Viewing peaks at 15:00 and Sat is the strongest weekday while Mon is the weakest — a clear scheduling arbitrage. 3,596 subscribers are flagged inactive, representing the single largest reactivation pool available to the CVM team.

Three decisions this quarter

1. Reactivate the 3,596 dormant subscribers with owned-channel campaigns (email & social reach is universal).
2. Rebalance the schedule — move tent-pole content into Mon and the off-peak hours around the 15:00 spike.
3. Defend concentration risk — ICC Cricket World Cup 2011 carries the platform; commission adjacent content before rights renewal.

Top 10 Channels by Total Minutes

Audience & Reach

Gauteng dominates the footprint with 1,607 subscribers. Provinces with low subscriber counts but healthy minutes per subscriber are acquisition targets — demand exists ahead of reach. Age and usage-bucket mixes show where the upgrade ladder sits.

Usage Intensity Mix

When South Africa Watches

Minutes peak at 15:00. Sat is the strongest day (18K minutes) and Mon the weakest (7K) — a 154% gap the schedule can flatten.

CVM Action Plan

Reactivate dormant subscribers

Target the 3,596 inactive subscribers with a personalised "what you missed" email leading on the top channel in their province. Email and social contactability is effectively universal, so incremental cost per reactivation is near zero.

Lift light viewers up the usage ladder

1,652 subscribers sit in the low-usage bucket. Continue-watching nudges and binge bundles scheduled into the Mon trough are the cheapest available minute growth.

Programme against the weak day

Mon carries the least viewing. Move premieres and live events there to flatten the weekly curve and spread infrastructure load.

Manage channel concentration risk

ICC Cricket World Cup 2011 drives 27.1% of minutes. Commission or acquire adjacent titles so a rights loss does not remove a fifth of engagement overnight.

Acquire in under-penetrated provinces

Concentrate acquisition spend where subscriber counts are lowest but minutes per subscriber are healthy — latent demand is already proven.

Protect the high-value core

The Young Adults cohort is the largest audience block. Loyalty perks here defend more minutes than any acquisition cohort can replace.
